

Environment and Natural Resources in Mexico

Overview

Rely on a strong Environmental practice with deep experience handling legal matters focused on sustainable development in Mexico.

Our firm can provide you with legal services holistically, allowing clients to successfully develop projects in the energy, infrastructure, leisure, real estate and other sectors. Benefit from our customized legal services to ensure the successful and sustainable development of your projects.

Our practice addresses issues of environmental impact, environmental audits, protected areas, wildlife, hazardous waste, forestry, emissions, noise, biotechnology, soil pollution and environmental responsibility, among others. We regularly handle permitting issues before the Ministry of the Environment and Natural Resources (SEMARNAT) at the federal level, as well as with state authorities, and in dealing with the energy industry, with the Environmental and Safety Agency for the Hydrocarbons Sector (ASEA). Closely linked to our environmental practice are social impact assessments and "social licensing" issues involved in energy and other infrastructure permits, stemming from international agreements and adopted into domestic legislation.

Our global offices stand poised to help when your environmental issues cross borders and involve multiple regulatory frameworks.
