

Overview

Our Mexico Privacy and Cybersecurity lawyers operate at the intersection of technology and law. We understand that data is one of your core assets, driving insights and enabling development of valuable new products and services.

However, the collection, use and storage of personal information is subject to an increasingly complex framework of laws and regulations around the world. Monetary penalties for violating these laws are severe and reputational damage can be irreparable.

Leverage our knowledge of these requirements to design real-world strategies to unlock the power of your data while building trust in your brands. We work with you to enhance disclosures, strengthen compliance and implement integrated risk management programs that create a strong control environment as a springboard for innovation.

In addition to proactive counseling, we contribute our strategic insight when you need to respond to crises. For example, we work side by side with clients to manage data breaches by directing forensic analysis, remediating vulnerabilities, understanding legal requirements and coordinating communications with people whose information was compromised.

Our Privacy and Cybersecurity group works across all sectors offering a full complement of counseling and advice, regulatory and litigation services, including:

- Designing and implementing global compliance programs and risk mitigation;
- Counseling on data security, data loss prevention and breach, and global data transfers;
- Incident response planning and execution;
- Answering data related government requirements, etc.
